

# Does material sticking in your hopper restrict your profit flow? **VIBCO will clear the way.**

## **CEMENT HOPPER**

We're the **CONCRETE** Vibrator Guys.™

### **Product Application Bulletin #435 Model VS-190 Silent Pneumatic Turbine Vibrator**

### **VIBCO'S SOLUTION**

VIBCO's Model VS-190 Silent Pneumatic Turbine Vibrator was mounted to the sloping portion of the hopper. The sticking problem was completely eliminated which resulted in consistently accurate batches, no more labor hours and production time lost to banging on the hopper, and no more batches rejected because incorrect amounts of cement were dispensed.

### **VIBCO'S BENEFITS**

After installing the VIBCO VS-190 Silent Pneumatic Turbine Vibrator the customer received the following benefits:

- More accurate batches
- Eliminated labor hours and production time lost to clearing hopper clogs
- No more batches rejected because of inconsistent and incorrect amounts of cement powder being dispensed

VS-190

“We were losing material and had uneven batches...

Batch consistency is an important quality issue and we were having trouble getting the right amount of cement powder out of the hopper. The powder kept sticking to the sides. It was slowing our production rate because someone had to bang on the sides of the hopper to get it to empty. Even after the wasted labor time and production slow-down, we still weren't getting the right amount of material dispensed. We were still rejecting some batches and losing material. We needed a solution and VIBCO had it for us. Their vibrator did the trick. Thanks!”

Quality Manager  
George P., Florida

### **Model VS-190 Silent Pneumatic Turbine Vibrator**

- 7,200 VPM at 80 PSI
- 270 lbs of force
- 9 CFM
- 70 dB on A-Scale at 1 meter
