“I knew that our process could be more efficient...

We were having a problem with cheese building up and clogging the hoppers completely. Once that happened, we would have to halt the entire process for cleaning. That meant climbing across the tray and banging the heck out of the hoppers to loosen the built up cheese. Once we banged out the clogs, we’d have to sterilize again because of the potential for contamination. In addition to the production time lost during the downtime, the sterilization process caused a tremendous amount of product waste. We realized that banging on our hoppers was actually making the problem worse over time because of the resulting dents and hammer rash. Thanks for providing a solution that really works!”

Production Manager,
Michelle W., Vermont

Model BVS-190
Silent Pneumatic Turbine Vibrator

- 10,500 VPM at 80 PSI
- 75 lbs of force
- 5.5 CFM at 80 PSI
- 67 dB at 80 PSI
