

Are chute clogs impacting your fill rates? VIBCO has a smart (and silent) solution.

We're the ^{SILENT} Vibrator Guys.™

Product Application Bulletin #431 Model SPRT-21 Small Impact Electric Vibrator

VIBCO'S SOLUTION

A VIBCO SPRT-21 Small Impact Electric Vibrator was installed on the side of the chute - along with a timer and foot switch. The vibrator can be activated during the filling cycle to get material whenever needed. Bags are now filled with the correct amount of material and the chute no longer clogs. Output has increased significantly because employees no longer need to manually add or remove material from improperly filled bags.

VIBCO'S BENEFITS

After installing the VIBCO SPRT-21 Small Impact Vibrator (with optional timer and foot switch) the customer received the following benefits:

- Excellent fill rates with timed cycle
- No more man-hours lost to manual bag fill adjustments
- Long, trouble-free use of the vibrator with "as needed" silent operation

SPRT-21

CHUTE VIBRATORS

"Our bulk bag packer was a constant source of irritation...

It was supposed to be a fairly automated process, but in reality we were doing a lot of manual work. The fill chute would clog and dispense an incorrect amount of material during the timed fill cycle. We often had to weigh the bags and then add or remove material to get the right amount filled. The whole process was draining our time and resources - we needed a solution. I was pleasantly surprised at the affordability, effectiveness, and quiet operation of the VIBCO SPRT-21 Small Impact Electric Vibrator. It's made a huge difference! Now the process really is automated, especially since we use the vibrator with a timer to match the fill cycle."
