Bulletin #430
Model VS-250
Silent Pneumatic
Turbine Vibrator**

VIBCO'S SOLUTION

Two VIBCO VS-250 Silent Pneumatic Turbine Vibrators were installed - one on each side of the hopper at alternate heights for proper vibration. The flour now flows consistently from the bin to the rotary valve and employees no longer have to climb up to the catwalk to bang on the sides of the bin. This proved to be a simple, low-cost solution to a costly, labor-intensive and dangerous problem.

VIBCO'S BENEFITS

After installing the two VIBCO VS-250 Silent Pneumatic Turbine Vibrators the customer received the following benefits:

- Increased production levels with better flow rate and consistency
- No more labor hours wasted banging out bin clogs
- Much safer work environment

VS-250

BIN

“Climbing up to bang on the hopper was risky...

The flow of flour from the bin to the rotary valve was pretty erratic and would clog up regularly. The clogs were definitely affecting our production levels. In order to keep the flour moving, one of my guys would climb up on the catwalk two stories above the shop floor, lean out, and bang on the bin with a hammer. Not only did the hammering waste time and take an employee off of the production line, it was a really dangerous situation. We needed a better way to clear those clogs and we needed it fast! I called my equipment dealer late on a Friday afternoon, VIBCO was able to ship same-day, and we had our vibrators installed by noon on Monday!”

Production Manager,
Kevin S., Virginia

**Model VS-250
Silent Pneumatic Turbine Vibrator**

- 7,200 VPM at 80 PSI
- 10.5 CFM at 80 PSI
- 500 lbs of force at 80 PSI
- 70 dB from A-Scale at 1 meter
